1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 3, 4, 6, 8, 9, 11, 12 and 14 are rejected under 35 U.S.C. 102(b) as being anticipated by Sasamura.

Note Fig. 1, where the recited first and second switching transistors read on FETs 14 and 12, respectively; the recited first and second current source read on BJTs 34 and 32, respectively; and the recited first, second and third isolation resistors read on resistors 26, 24 and 28, respectively.

The operation recited on the last three lines of claim 1 is deemed to be inherent in the operation of the Fig. 1 circuitry of Sasamura because all of the claimed elements and connections are fully anticipated, as noted above.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the

Art Unit: 2816

art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 2, 5, 7, 10 and 13 are rejected under 35 U.S.C.

103(a) as being unpatentable over Sasamura.

The use of BJTs instead of FETs would have been obvious to those having ordinary skill in the art as a routine design expedient, because it is notoriously well-known in the art that a semiconductor switching transistor can be formed in either field effect or bipolar technology, without any unexpected changes in circuit operation.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

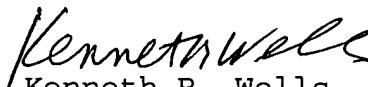

Note Fig. 6 of Takahashi et al, Fig. 3A of Quinn and Fig. 3 of Murden, each of which is seen to anticipate at least the independent claims of the present application.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kenneth B. Wells whose telephone number is (571)272-1757. The examiner can normally be reached on Monday through Friday from 8:30am to 5:00pm.
